RE: Clinton St Park - Clean Fill Definition

Dear Mr. Haines,

The NJDEP defines "Clean Fill" as:

- 1) Authorized quarry/mine material (i.e. certified); or
- 2) Soil that meets all NJDEP soil remediation standards, and has no debris, solid waste, or free liquids. With non-certified soil, I would ask to see the sampling results from a certified lab and the sampling field notes prior to any material being brought on-site. The analytical results and sampling methodology must be completed in accordance with NJDEP regulations.

If you have any questions or require any additional information, please telephone me at (973) 560-1400 Ext. 152.

Sincerely,  
EWMA

Francis Rooney, LSRP  
Senior Project Manager
